

Trentar Acquires Nuove Energie® and Launches Global Water Solutions Brand “Nuove H2O”

[Houston, USA] | [August 4th 2026] - Trentar today announced the acquisition of Nuove Energie®, an Italy and U.S. based provider of advanced filtration technologies for municipal, industrial wastewater and sludge, with more than 45 years of experience and thousands of installations worldwide. Trentar also launches Nuove H2O as its global water solutions brand, bringing its growing water portfolio under a single brand to better serve customers.

Nuove Energie®'s filtration systems are based on patented Dynamic Tangential Filtration® (DTF) disk technology to deliver high separation efficiency, compact footprint, ease of operation, and long service life. These stainless-steel discs also provide high resistance to wear and chemical degradation, simple maintenance, and the prevention of microplastic release into the environment.

Vrishank Menon, Co-Founder, Nuove H2O said:

"Our parent, Trentar, is building solutions that drive transformation in industry, society, and the planet. Water infrastructure is a key pillar of this strategy because cities and industries of the future will be bigger, greener, and increasingly reliant on circular solutions to survive and thrive. Nuove Energie's 45+ years of expertise and thousands of successful installations perfectly align with our mission to create a global platform for advanced water solutions."

Anthony Dusovic, President & CEO of Nuove H2O, added:

"Nuove Energie® brings real depth with differentiated technologies and custom engineered solutions that address issues of extreme wet weather, increased regulatory pressure and resource scarcity. They align perfectly with our vision to set the industry standard for service and reliability in water treatment and reuse. That's exactly where Trentar is focused."

Gianmaria Massignani, CEO Nuove Energie®, said:

"We developed our patented Dynamic Tangential Filtration® technology based on a simple principle: separation should be efficient, compact, and easy to operate. Our technologies, Ultrascreen® for tertiary filtration, Primescreen® for primary filtration, and Conoscreen® for industrial applications, are recognized and appreciated worldwide. Joining Trentar allows us to bring these solutions to an even broader customer base across municipal and industrial markets, accelerating our international growth journey."

Financial terms of the transaction were not disclosed.

About Trentar

Trentar is a group of visionary companies building advanced systems across key sectors spanning commercial mobility, energy & battery storage, geospatial intelligence, data science & artificial intelligence and health management. Through Nuove H2O, its global water technologies brand, Trentar is expanding its capabilities across water treatment, reuse, resource recovery, and sustainable infrastructure.

About Nuove Energie®

Nuove Energie® is an Italy and U.S. based water technology company specializing in advanced filtration systems for municipal and industrial water treatment applications, utilizing its patented Dynamic Tangential Filtration® unique technology (DTF).
